All programs are appropriate for adults. If children wish to attend, it is at the discretion of their parents or guardians, though a general recommendation is that these programs would be appropriate for children ages 10 and up.

Need some presentation ideas if it's the first time I will be presenting a program for your location? Look for presentations marked by ** for my recommendations. These are programs that traditionally and consistently have brought in the largest audiences over the past 20+ years. Look for **NEW** next to the program title for topics that have recently been added to my list.

Don't see a topic you are interested in? Let me know if you have a theme to help connect to other programs you are planning. I can suggest something – or I may be able to create a new program for you.

NEW Wild Weather of the Solar System

Our Solar System is home to worlds with wild and wonderful weather. Let's take a closer look at weather on all of the planets.

NEW 12 Things that Make Life on Earth Possible

Earth has sustained life in many different forms for more than 3 billion years. We'll highlight an (incomplete) list of 12 things that make our planet special.

NEW Women in Space Exploration

Women have been involved in getting people to space for decades. Learn about several historic, though largely unknown, trailblazers.

NEW NASA's Next Great Telescope

The James Webb Space Telescope will fundamentally alter our understanding of black holes, the early Universe, the life cycle of stars, planets, and more. Learn more about this groundbreaking mission as we prepare for the next giant leap forward in astronomy and space exploration.

NEW Defining Time

What time is it? That's a surprisingly hard question to answer! We'll venture through several thousand years of history in the human quest to measure and define time.

Our Solar System

Icy Worlds

Ice: it's not just the stuff you shovel off the sidewalk. Many different ices are all over our Solar System – and it is really...cool...stuff to study. We'll investigate ices on hot planets and cold comets, moons made mostly of ice, flowing and floating glaciers, and even ice volcanoes.

****Roving the Red Planet**

We've been exploring the Red Planet for decades, and there are 6 U.S. spacecraft on or orbiting Mars right now. What have we learned about Mars with our fleet of robotic visitors? Plenty! We'll cover the

past, present, and future of Martian exploration. *Note: This program is updated frequently with new science results, as available.*

Pluto Revealed

Thanks to exploration in the past few years, we now know Pluto as one of the most dynamic - and strange! - places in the entire Solar System. How strange? Let's find out!

****Armchair Tour of the Solar System**

Explore our Solar System without stepping foot outside! We will showcase some of the latest NASA spacecraft images of our Solar System, touching on our stunning Sun, planets, and so much more. *Note: This program can be presented as a stand-alone program or as Part 1 of a two-part series with Armchair Tour of the Universe (see below).*

Past, Present, and Future

The Space Race

In the 1960s, the U.S. and the Soviet Union were locked in a race to send men to the Moon. How did it all begin? How did the Soviets try to beat the Americans? And, what happened to the Soviet effort after Neil Armstrong and Buzz Aldrin walked on the Moon in July 1969?

Women in Astronomy

Women have played a part in astronomical discoveries for centuries – but many of their stories are overlooked or untold. We will explore advancements made by several ladies of science, as well as the hardships they had to overcome to be able to explore the Universe.

Space Food

This presentation will highlight the development of space eats from the earliest days of space travel, show how food is eaten – and grown - on the International Space Station today, and what food might look like for future long-term space missions.

The Science of Climate Change

The concept of climate change is a hot topic these days. In this presentation, we will turn our attention to the science evidence: What does science say is happening? Where does the data come from? What might be in our future?

The Great North American Eclipse

Did you see the solar eclipse in 2017? Get ready to do it all over again! There are two impressive solar eclipses coming up in October 2023 and April 2024! Learn what eclipses are, where to see them, when to look, and how to view solar eclipses safely.

Astronomy Near and Far

Looking for Earth Elsewhere

We have found thousands of planets in the past 25+ years. Some have similarities to our own home planet – and some are just plain weird. Join us for an overview of the search for distant planets around other stars.

****Through the Eyes of Hubble**

The Hubble Space Telescope has had more impact on astronomy and the public's awareness of astronomy than any other telescope in history. This presentation will highlight recent and historic images from the last 31+ years of Hubble's mission.

Armchair Tour of the Universe

Go on a trip around the Universe without going outside! This presentation will take you on a whirlwind visit through our Universe's most amazing objects using images from the world's most advanced telescopes. *Note: This program can be presented as a stand-alone program or as Part 2 of a two-part series with Armchair Tour of the Solar System.*

Skywatching

****Skywatching Using Your Eyes**

So much observation of our daytime and nighttime skies can be done without a telescope. This presentation will focus on an overview of celestial observations you can do with just your eyes, including Moon phases, eclipses, planets, stars, and much more in a session suited to an astronomy novice.

Note: This program will be updated for the time period of your specific program.

Skywatching Using a Telescope

Bring the Universe to your neighborhood! (Your library name here) (has/soon will have) (telescopes/a telescope) for you to check out and use at home. Learn how to operate this telescope and get tips for skywatching with your eyes and with mobile phones.

Note: This program is specifically for institutions that have, or soon will have, a telescope or telescopes for patrons to check out. I will tailor my program to the model of telescope that your institution has acquired.
